

Don't Wrap your Water Fountain in Plastic! Use the Drinking Fountain Lockout!

As you welcome back employees, students or other visitors to your facilities, keeping everyone protected means high-touch areas are becoming new hot zones requiring attention. With proper identification that provides directions, you can reduce some risks. But sometimes identification can be overlooked.

With this innovative device you can cover the spout of most drinking fountains to prevent use, and keep hands off a high-touch area. With this device you can also:

- Keep the water flowing on bottle-filling stations connected to the fountain so people can stay hydrated.
- Lock out standard plug valves with a stem diameter ranging from 1-1/2 in. to 2-1/8 in. when pandemic concerns are over.

The Winning Highlights:

- Get a visual indicator and a physical carrier in one product.
- Use anywhere drinking fountains are available
- The added bonus is **LOCK OUT** plug valves after pandemic concerns are over.
