

You Need an AED During COVID

Since February 2020, sudden cardiac arrests (SCA) have increased across the globe. Here's why it's more important now than ever before to have an automated external defibrillator (AED) available to help combat Out of Hospital Cardiac Arrest (OHCA). There is an increase in OHCA events.1

2019

one year **52**% 0 - 0 - 02020 490

Deaths from OHCA events increased²

Survival Rates

Bystander Response

FMT Response Time

DECREASED

14.9% to 7.9%

DECREASED 61% to 51%

INCREASED 6.6 to 7.6 minutes Cardiac damage linked to COVID-193

OUT OF 100 PATIENTS WITH MILD ILLNESSES AND A MEDIAN AGE OF 59

had myocarditis

or inflammation

showed heart abnormalities

Myocarditis is a risk factor for SCA in young athletes.^{4,5}

five Big Ten Conference athletes

Causes about 75 deaths per year in athletes ages 13-25 One in three people with COVID-19 in the U.S. has heart disease.7
