

Why do you need a Safety Cabinet?

One of the leading causes of industrial fires is the improper storage and handling of flammable liquids. Safety cabinets help you safely store fuels, chemicals, and solvents to reduce the risk of fire and protect your people and property.

Safety Cabinets serve critical functions:

- Improve awareness—high-visibility cabinet color and prominent labeling identify potentially hazardous chemicals
- Keep dangerous liquids safely organized and segregated—for indoor use
- Increase maximum allowable quantities of flammable and combustible liquids in control areas
- Improve efficiency by locating materials near point-of-use
- Improve security with locking mechanism
- Ensure safe evacuation time in the event of a fire
- Provide compliance with federal OSHA regulations and the National Fire Protection Association

Considerations when selecting a safety cabinet:

- Federal, state, and local compliance requirements
- Security and safety features as U-Loc™ padlockable handle, SpillSlope® shelves, Haz-Alert™ warning labels, all welded construction
- Size and type of container being stored
- Type of chemical being stored
- Capacity needed

10 Year
Limited Warranty
