

Fed up with pinched fingers, blown-out backs and dinged-up walls, a global HVAC leader came to us for a safer way to lift and carry ladders. The solution was so simple, we're kinda mad we didn't come up with it sooner. The Arsenal 5300 Ladder Shoulder Lifting Strap & Carrying Handle System is designed for easier and safer transport of heavy ladders. This ladder carrier consists of a padded pocket, 3 hook & loop straps and an optional shoulder strap that securely attaches to keep ladders safely closed when carrying.

The Forgotten Rung of Ladder Safety

Almost all ladder safety is focused on safer climbing—but what about lugging that thing from A to B without C'ing yourself to a worker's comp claim?

PROBLEM: Loading & Unloading

Causing sprains, strains, damage to ladders and other equipment.

SOLUTION: Carry Handle

Rubberized grab handle for leverage and control

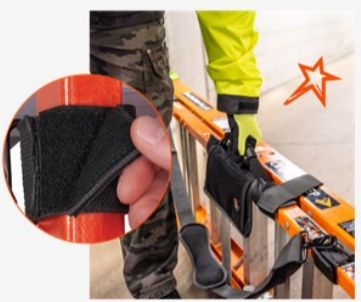

PROBLEM: Long Haul to the Job Site

Difficult to transport without causing damage to worker, ladder, property or others.

SOLUTION: Padded Shoulder Strap

Comfortable, balanced carry that frees up hands to open doors

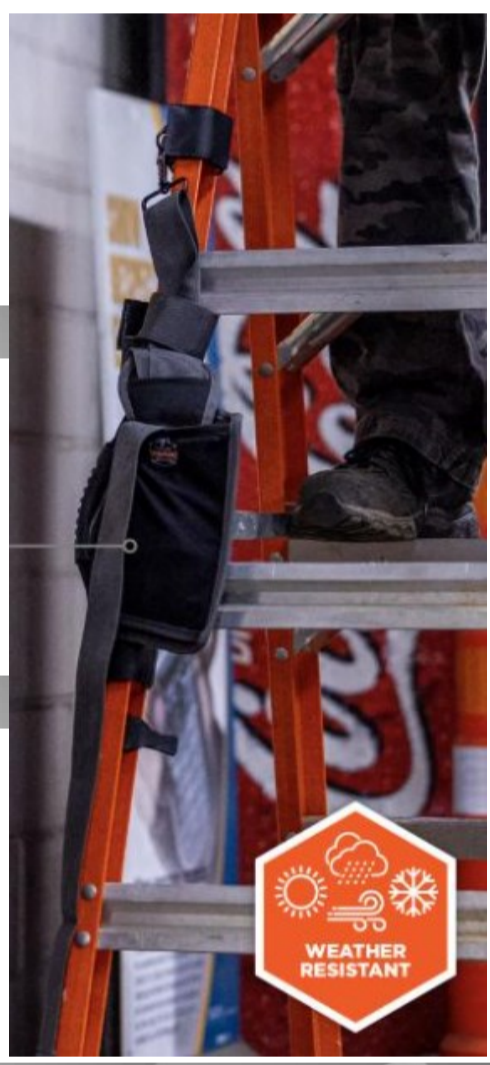

PROBLEM: Rails Separating

Causing pinched fingers, damage to property, ladder and more.

SOLUTION: Hook & Loop Rail Strap

Secures around outer rails to keep ladder closed during transport

Since 1983, Ergodyne has been sweating the small stuff to help crews work smarter. Give your ladder-lugging crew a much-needed lift with the **Arsenal Ladder Shoulder Carrying Strap and Carrying Handle**, designed with close worker collaboration to help shoulder the load of heavy, awkward step ladders (and raw materials like lumber).
