

LET THE SUN SHINE ON YOUR NEXT MASKING PROJECT.

3M

Authorized Distributor

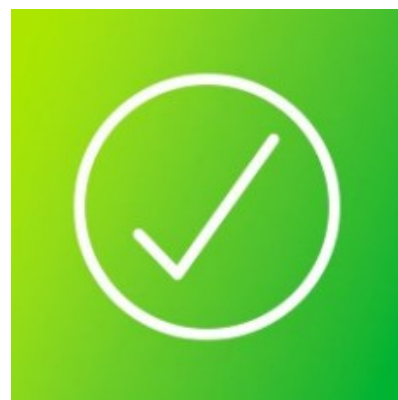

Can your masking tape remove cleanly after 14 days in direct sunlight?

Get clean removal for up to 14 days under UV rays.

Masking in the sun is no fun. With some tapes, prolonged exposure to ultraviolet (UV) light can make removal a pain and could ruin your best work with edge residue. Discover a solution created to resist the effects of UV rays. It removes cleanly from most surfaces with little to no edge residue for up to 14 days even after outdoor exposure. Choose 3M™ UV Resistant Green Masking Tape for all kinds of projects under the sun.

Stuck masking in direct sunlight?

If you get stuck in the sun, you need to find a masking tape that removes cleanly and resists bleed-through. Achieve crisp paint lines for up to 14 days outdoors with 3M™ UV Resistant Green Masking Tape.

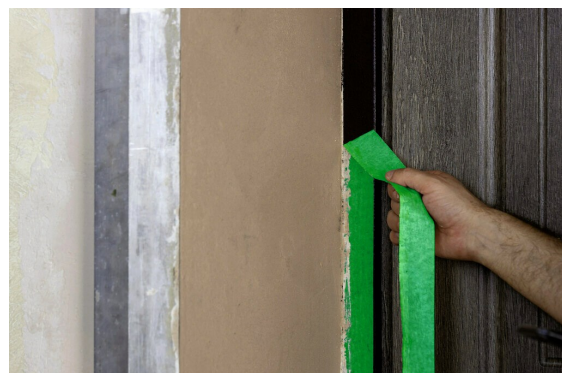

Versatility indoors and out.

3M™ UV Resistant Green Masking Tape offers versatile performance for your professional projects. Get it for holding, bundling, paint masking and more. When things heat up, 3M™ UV Resistant Green Masking Tape can withstand temperatures of up to 175°F (79°C) for up to 30 minutes.

Easy to use too!

Just unwind the crepe paper tape and tear it by hand. 3M™ UV Resistant Green Masking Tape goes on smooth and removes cleanly. For 14-day UV resistance, choose the one that loves getting some sun.
