

REAL LIFE PROTECTION FROM FENTANYL

According to the NIH, fentanyl is a powerful synthetic opioid that is FDA-approved to treat severe pain related to surgery or complex pain conditions. Drug overdose fatalities exceeded auto accidents as a cause of death for the first time in 2016. Illegally manufactured fentanyl is chiefly responsible for the current crisis. Opioid-involved overdose deaths have risen from 21,089 in 2010 to 80,411 in 2021.

ILLICIT DRUGS CAN BE IN POWDER, PILL, OR LIQUID FORMS. LAW ENFORCEMENT, PUBLIC WORKS EMPLOYEES, AND OTHERS CAN COME INTO CONTACT BY:

- > Breathing (Inhalation)
- > Eating (Ingestion)
- > Touching eyes, nose, or mouth with contaminated hands or gloves or when illicit drugs come into contact with the eyes, nose, or mouth directly (Mucosal)
- > Liquid illicit drugs may be absorbed by the skin (Dermal)
- > Being stuck by a needle (Percutaneous)

Just 2 to 3 milligrams of fentanyl, comparable to 5 to 7 grains of salt, can induce respiratory depression, arrest, and death. NIOSH recommends always wearing nitrile gloves when illicit drugs may be present and change them properly when the gloves become contaminated. This helps prevent exposures to these illicit drugs.

PIP® NOW OFFERS FOUR GLOVES THAT HAVE BEEN TESTED AND PROVEN TO PROVIDE SPECIALIZED PROTECTION FROM FENTANYL, WITH THREE OFFERING ADDITIONAL PROTECTION AGAINST THE RESULTING GASTRIC ACID ON OVERDOSE VOMIT.

These gloves meet the industry ASTM D6978-05 testing guidelines of over 240 minutes for breakthrough and exposure.

*Passes ASTM D6978 standard for handling Fentanyl

**Tested to EN 374-1: Hydrochloric Acid - Level B (480 minutes)
